Chapter 12  Forces and Motion

Section 12.2 Newton’s First and Second Laws of Motion  
(pages 363–369)

This section discusses how force and mass affect acceleration. The acceleration due to gravity is defined, and mass and weight are compared.

Reading Strategy (page 363)

Building Vocabulary  As you read this section, write a definition in the table for each vocabulary word you encounter. Use your own words in the definitions. For more information on this Reading Strategy, see the Reading and Study Skills in the Skills and Reference Handbook at the end of your textbook.

Aristotle, Galileo, and Newton (pages 363–364)

Match each scientist with his accomplishment.

Accomplishment  \[\begin{array}{ll}
\text{Accomplishment} & \text{Scientist} \\
\text{1. Italian scientist who did experiments} & \text{b. Galileo} \\
\text{that helped correct misconceptions} & \\
\text{about force and motion} & \\
\text{2. Scientist who studied in England} & \text{a. Aristotle} \\
\text{and introduced several laws describing} & \\
\text{force and motion} & \\
\text{3. An ancient Greek philosopher who} & \text{c. Newton} \\
\text{made many scientific discoveries} & \\
\text{through observation and logical reasoning} & \\
\end{array}\]

Newton’s First Law of Motion (pages 364–365)

4. Is the following sentence true or false? According to Newton’s first law of motion, an object’s state of motion does not change as long as the net force acting on it is zero. ______________

5. What is inertia? ________________________________
Chapter 12  Forces and Motion

6. Is the following sentence true or false? The law of inertia states that an object in motion will eventually slow down and come to a complete stop if it travels far enough in the same direction.
   true

Newton’s Second Law of Motion (pages 365–368)

7. According to Newton’s second law of motion, acceleration of an object depends upon the ____________ of the object and the ________________ acting on it.

Match each term with its description.

<table>
<thead>
<tr>
<th>Description</th>
<th>Term</th>
</tr>
</thead>
<tbody>
<tr>
<td>8. A measure of the inertia of an object</td>
<td>a. mass</td>
</tr>
<tr>
<td>9. Net force/Mass</td>
<td>b. net force</td>
</tr>
<tr>
<td>10. Causes an object’s velocity to change</td>
<td>c. acceleration</td>
</tr>
</tbody>
</table>

11. Is the following sentence true or false? The acceleration of an object is always in the same direction as the net force acting on the object. ________________

12. Is the following sentence true or false? If the same force acts upon two objects with different masses, the acceleration will be greater for the object with greater mass. ________________

Weight and Mass (pages 368–369)

13. What is weight? ________________________________

14. Write the formula used to calculate the weight of an object. ________________________________

15. Is the following sentence true or false? Because the weight formula shows that mass and weight are proportional, doubling the mass of an object will not affect its weight. ________________

16. Complete the table below by describing the difference between mass and weight.

<table>
<thead>
<tr>
<th>Mass and Weight</th>

<tr>
<td></td>
</tr>
</tbody>
</table>

17. On the moon, the acceleration due to gravity is only about one sixth that on Earth. Thus, an object will weigh ________________ on the moon than it weighs on Earth.
